

Clean Commodities Corp. Expands Sun Valley PGE Project

Vancouver, BC – June 1, 2016 – Clean Commodities Corp. (TSX-V: CLE) (“CLE” or the “Company”) is pleased to report that it has expanded its Sun Valley PGE Project, a large scale platinum group element (PGE) exploration project located in Quebec, Canada.

“This strategic addition to our Sun Valley PGE Project is directly adjacent to Northern Shield’s Huckleberry Project to the north and is potentially on-trend with their Discovery Zone. We anticipate that the additional ground will open further exploration opportunities for CLE and we are in the process of evaluating exploration options for our Sun Valley PGE Project this coming summer,” stated Ryan Kalt, CEO of the Corporation.

About the Sun Valley PGE Project Expansion

The N-NW expansion of the Sun Valley PGE Project consists of 26 additional claim cells representing 1,259 ha.

The additional Sun Valley PGE Project ground was acquired through map designation and is currently within the pending phase of acquisition. All required fees have been paid and 100% tenure ownership is expected to be confirmed shortly. This new ground was acquired by the Company through an arm’s length exploration services company at a cost equating claim fees plus a 2% royalty.

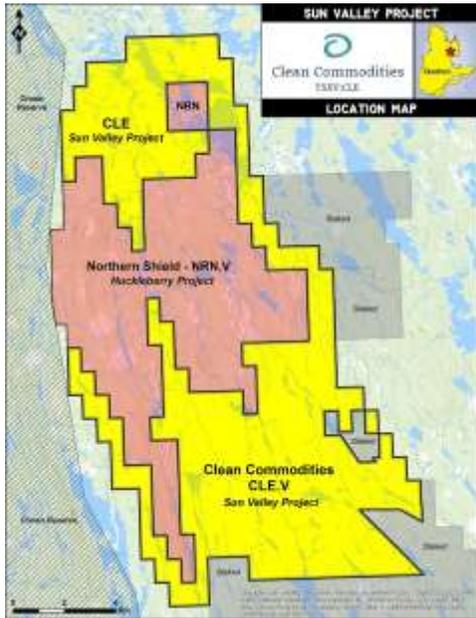

Management cautions that past results or discoveries on adjacent properties (i.e. Huckleberry) may not necessarily be indicative to the presence of mineralization on the Company’s properties (i.e. Sun Valley).

About the Sun Valley PGE Project

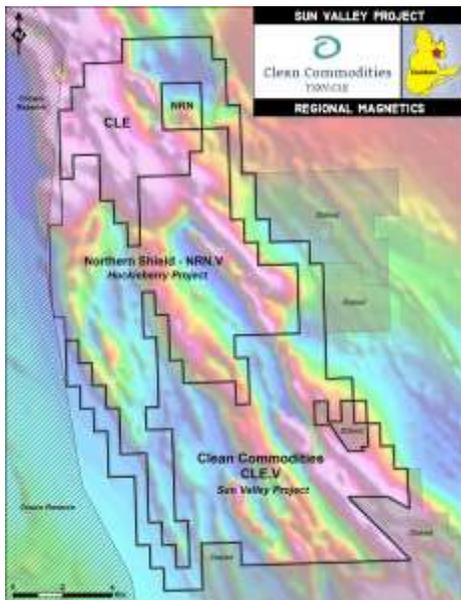

The Sun Valley PGE Project claim block is anticipated to encompass well over two hundred mineral cell claims which have been applied for on ground immediately surrounding the Huckleberry Project being advanced by Northern Shield Resources Inc. (“Northern Shield”).

In aggregate, CLE's Sun Valley PGE Project claim cells are expected to cover more than 11,000 ha and represent one of the largest mineral tenure holdings in the area.

Claim Map of the Sun Valley PGE Project (Updated)

Regional Magnetics Map of the Sun Valley PGE Project (Updated)

CLE believes that its Sun Valley PGE Project has similar exploration potential to the immediately adjacent Huckleberry Project held by Northern Shield.

The adjacent Huckleberry Project is being explored by Northern Shield as a large-scale (segregated) magmatic copper target with nickel and PGE credits. Cu-Ni-PGE mineralization has been seen throughout Northern Shield's Huckleberry Project in a variety of geological settings (see Northern Shield Presentation, http://www.northern-shield.com/misc/NRN_November_2015_Huckleberry_Update.pdf)

Northern Shield further notes that their Huckleberry Project hosts a complex and dynamic mafic intrusive complex. Such characteristics are common to very large Ni-Cu-PGE deposits and the

complexity of the geology and the discovery by Northern Shield of a nickel-rich xenolith suggests that a conduit is likely nearby. The Ni-Cu-PGE mineralization at Voisey's Bay and Noril'sk is hosted in, and near, the magma conduit (see also Northern Shield Presentation, http://www.northern-shield.com/misc/NRN_November_2015_Huckleberry_Update.pdf)

Multiple samples collected in 2015 from Northern Shield's Huckleberry Project exceed 1 g/t PGE+Au including a select surface sample assaying a peak of 10.6% Cu and 16 g/t PGE, further highlighting the potential of the area.

Management cautions that past results or discoveries on adjacent properties (i.e. Huckleberry) may not necessarily be indicative to the presence of mineralization on the Company's properties (i.e. Sun Valley).

Qualified Person

Darren L. Smith, M.Sc., P.Geol., Dahrouge Geological Consulting Ltd., a Qualified Person as defined by National Instrument 43-101, has reviewed the technical information in this news release.

About Clean Commodities Corp.

Clean Commodities Corp. (TSXV:CLE) is an exploration company holding a 100% position in the Spodumene Lake and Dumont Lithium Projects, which combined represent the large tenure position in the Whabouchi Lithium District and a 50% interest in the district-scale Preston Uranium Project, one of the largest tenure positions in the emerging Western Athabasca Basin. More information about CLE and its projects may be found at www.cleancommodities.com.

Signed,

Ryan Kalt, Chief Executive Officer
